Key areas of excellence

- Excellence in skilled manpower mobilisation
- Excellence in Project Management
- Superior HSE Performance
- Project target achievement
- Minimal Environmental Impact
- Continuous Improvement of our Quality Management System

Industries of interest

- Petrochemical Projects
- Power projects
- Automobile industry
- Ship building and Marine
- Hydro power and wind energy
- Railways
- Mining
- Commercial Structures

The blasting technology is by hurling shots & grits at high velocity looks pretty simple. But in the world of shot blasting machines, simple does not mean maintenance free. The essence of these machines, no matter how best they are designed, is that clean core parts comes at the price of dramatic wear and tear of media, as well as machine components that comes in contact with abrasives. BCP has a well experienced team which can suggest what type of equipment and process can give best results at most cost effective method and operate and maintain the machines with minimal running cost.
